SKILLS

CSS - Bootstrap & tailwind css

JS-framework jquery/nest/nuxt/next

PHP - Ci and Laravel framework

Flutter-dart beginner

OTHER

DB Sql & Nosql

Server Os -Linux ubuntu

Nginx- for web server & proxy

WORK-PLACE

@ iDin-iHin 2023 - now in Full-stack dev

EXPERIENCE WORK

• NestJs + Nextjs

Use nextjs as a Frontend and Nestjs as a Be also use socket io with nginx to connect realtime communicate Chat system

• Qr app

Project built with PHP ci4 and flutter to scan barcode/Qr code to store product use MySQL as database and can login with line and firebase cloud messaging

• NextJs

I used it in another project where I was tasked with fixing bugs and migrating a university's server. That project used Laravel as the backend API.

ABOUT ME

I'm a passionate and adaptable developer with experience in web development using PHP (CI3/CI4, Laravel), JavaScript frameworks (NestJS, Nuxt.js, Next.js), and frontend tools like Tailwind CSS and Bootstrap. I enjoy solving real-world problems, especially in systems that involve API integration, automation, and data processing. I'm always looking to grow my skills and take on more technically challenging tasks.

SOFT SKILLS

- Hardworking
- Problem-Solving and Decision-Making

EDUCATION

Chitralada Technology Institute (CDTI)

- 2020 - 2024 Industrial automation

I need to utilize PHP along with Node.js/TypeScript frameworks (such as React, Vue, or NestJS) to either create a new project or maintain one developed by another developer.

• NestJs

I chose to use NestJS because it's suitable for working with our Hospital Information System (HIS). The system receives patient data at regular intervals (every X minutes), and NestJS is responsible for handling and processing that data efficiently. For the frontend, I use Nuxt.js together with Headless UI to manage the user interface.

• NuxtJs

Use Nuxtjs(vue) for connect with HIS & NestJs for bed refer system with Hospital
